

Dear FCC,

I am writing to tell you that as a very recent new subscriber to XM Satellite Radio I am amazed at how people who spend a majority of their work day in their vehicle ever survived without it. I find that it provides me with the most accurate and current information for the nightmarish traffic in Phoenix(trust me, its horrible, there is NO transit system!) I find myself travelling frequently between Arizona and California and find it is nice to have a variety of music and programming to listen to(honestly, you don't get much via the car radio.)

Please, I respectfully urge you to reject the NAB's petition 04-160 and keep the wide variety of programming available to America.

Thank you!

Todd Ott
